

## IPA COLLECTIVE SHOWCASE

### IMPROVING PROCESS CAPABILITY

Many organisations wish to improve their factory or process capability, it has been a goal for decades, with organisations investing heavily in programs based around the Toyota principles, such as LEAN, Six Sigma and others. We now talk about Industry 4.0 and artificial intelligence, as being the silver bullet for the future.

In this workshop, we will explore some of the fundamentals of improving process capability, through a series of presentations in a storyboard format. The presenters are part of our IPA Collective program, which brings together leading industry experts from around Australia.

Our Storyboard begins with building the foundations and progresses through to creating visibility through enterprise solutions.

#### OUR PRESENTERS

**Doug  
Mottram**

Efficiency Works

**John  
Broadbent**

Realise Potential

**Jason  
Norris**

JH Tester

**Tim  
Cheung**

Factory AI
